

LIEKKI® passive beam delivery fibers are designed and manufactured for the most flexible use in high power applications: The large, all-glass silica core enables beam delivery for up to multi-kW signal powers. Excellent mechanical reliability is ensured by high proof test levels, which opens up the possibility for tight coiling.

Features

- All-glass silica core for multi-kW operation
- High proof test levels to enable tight coiling of the fiber
- Equal outer diameters ensure easy cabling independent of the core size
- Acrylate coating enables fiber applications in extreme environmental conditions: Proven to operate up to 120°C and in extreme humidity.
- Acrylate coating provides flexible removal of cladding light power, e.g. for stripping of back-reflected light from the cladding.

Applications

- Beam delivery for up to multi-kW power levels

Typical Fiber Specifications
