

LIEKKI<sup>®</sup> Er30-4/125 fibers are highly doped erbium fibers designed for C- and L-band amplifiers, and ASE sources. These fibers are available as low cut-off fibers (Er30-4/125) and high cut-off fibers (Er30-4/125HC).

The high cut-off version has demonstrated the highest power conversion efficiency available in L-band: better than 50% for a typical fiber length of 20 m.

## **Features**

- Excellent batch consistency of erbium peak absorption and spectral shape
- Very short application length reduces non-linear effects like FWM, SRS and SBS
- Wide and flat spectrum
- Low polarization mode dispersion, typical value <25 fs/m</li>
- · Dual layer UV-cured acrylate coating
- Suitable for both 980 nm and 1480 nm pumping
- Telecom-like geometry with good spliceability to standard single mode fibers
- Telcordia GR-1312-CORE Generic Requirements qualified

## **Applications**

- C- and L-band DWDM, Metro and CATV
- ASE sources

## **Typical Fiber Specifications**

| Fiber                             |       | LIEKKI <sup>®</sup> Er30-4/125  | LIEKKI <sup>®</sup> Er30-4/125HC |
|-----------------------------------|-------|---------------------------------|----------------------------------|
| Optical                           | Units |                                 |                                  |
| Mode Field Diameter at 1550 nm    | μm    | $6.5 \pm 0.5$                   | 6.5 ± 0.5                        |
| Peak Core Absorption at 1530 nm   | dB/m  | $30.0 \pm 3.0$                  | 30.0 ± 3.0                       |
| Core Numerical Aperture (nominal) |       | 0.2                             | 0.2                              |
