

LIEKKI® Yb1200-20/125 fibers are very highly doped fibers with low photodarkening loss ideally suited for compact, medium average power pulsed amplifier applications where large mode area and short fiber length are critical for suppression of nonlinear effects. The high-efficiency, low-NA core provides high beam quality.

LIEKKI® Yb1200-20/125 fibers are available as double-clad (Yb1200-20/125DC) and double-clad polarization maintaining (Yb1200-20/125DC-PM) fibers.

## Features

- Industry leading fiber deposition process — Direct Nanoparticle Deposition
- *real*NA — most accurate fiber core NA to enable superior predictability of fiber performance and minimal splice loss
- Large, low-NA core for low nonlinearity and high beam quality applications
- Very high pump absorption enabling less than 2 m application lengths
- Low photodarkening loss
- Acrylate coating enables fiber applications in extreme environmental conditions: Proven to operate up to 120°C and in extreme humidity.
- Matching passive fibers available for minimal splice loss

## Applications

- Medium average power pulsed fiber amplifiers
- Marking and material processing lasers
- IR source for frequency doubling
